Erratum to: A four-part working bibliography of neuroethics: Part 4 - Ethical issues in clinical and social applications of neuroscience

Kira Becker¹, John R. Shook², Martina Darragh³ and James Giordano^{4*}

After the publication of this article [1] it has come to our attention that the following quote from the article by Lomber and Illes [2] "...must have the power — defined by quality of knowledge and ease of access — to help shape that future.." was missing a reference citation in the introduction.

The omission of the reference citation for this quote was the result of an error during the production process, and not an omission by, and/or error of the authors.
